MedicalQA human review set

100 Qwen3-14B v3 QA pairs in 5 groups of 20 · draft of 26 October 2026

What each group holds. 16 normal pairs (12 highly rated and 4 low rated by the LLM judges) and 4 deliberately bad pairs, one for each intended failure: trustworthiness, clarity, usefulness and care safety.

How the normal pairs were chosen. At random (seed 42) from the 76 kept videos, so each group covers all 12 topics once plus 4 extra topics, with at most one pair per video in a group. Highly rated: every criterion passed and "recommend as is" in all 6 runs of gpt-oss-120b and Gemma 4 (3 runs each). Low rated: a criterion failed and not "recommend as is" in at least 4 of those 6 runs.

Topics. The majority label of nine local models (round 2 prompt), with how many of the nine chose it.

Ratings. Criteria passed out of the runs each judge made (Safe = no care-safety problem found). A number in red means at least one run failed it. DeepSeek rated only the original 25 videos (Master, Teepa).

How the bad pairs were chosen. They come from Ruiwen's inverted prompt (Qwen3-14B asked to fail one criterion per pair). The generator often made a different failure from the one asked for, so for each slot 2 to 6 candidates with a clear topic were judged by gpt-oss-120b and Gemma 4 (3 runs each), and the one flagged most for its intended failure was kept. Each shows how many of its 6 runs flagged that failure. DeepSeek did not rate the bad pairs.

For reviewers. Mark each pair keep, edit or replace, and add a note on anything wrong with it.

Group 1

12 highly rated and 4 low rated normal pairs; then 4 deliberately bad pairs

1. Normal pair, highly rated

Source: ODJ 31, Safety In the Home When Dementia is in the Picture. · 4:48-4:55 · video · ODJ_v31_SingleAgent-qwen3-14b-v3_q5

Topic: F01 Daily routines, memory and independence (9/9 models) · **Subtopic:** S05 GEMS stages (9/9)

Q: What kind of constant support is needed for a person with dementia in the "amber" stage?

A: A person in the "amber" stage needs someone to constantly watch the environment and the task to ensure safety. They also need someone to monitor them and help them understand what is happening in the moment.

2. Normal pair, highly rated

Source: Master 7, A Deeper Dive Into How to Respond When a Person Living with Dementia Asks "Have You Seen My Mom?" · 5:04-5:15 · video · Master_v7_SingleAgent-qwen3-14b-v3_q3

Topic: F04 Communication: responding without correcting (9/9 models) · **Subtopic:** S17 Agitation and challenging behavior (5/9)

Q: What can happen if a caregiver moves too quickly after a person with dementia expresses distress?

A: Moving too quickly can confuse the person with dementia, especially if their brain is struggling to process information clearly. It may cause more distress or make it harder for them to express what they truly need.

3. Normal pair, highly rated

Source: SUP 21, SUP! Creating Partnerships with First Responders · 45:26-46:06 · video · SUP_v21_SingleAgent-qwen3-14b-v3_q5

Topic: F06 Physical assistance and touch (8/9 models) · **Subtopic:** S21 Touch and sensory changes (8/9)

Q: Why is it important to avoid touching someone with dementia without first giving them visual and verbal cues?

A: Touching someone without proper cues can be confusing or frightening for them. People with dementia may not understand why someone is touching them, so it's best to first make eye contact, speak clearly, and give them time to respond before any physical contact.

Topic: F09 Art, creativity and storytelling (9/9 models) · **Subtopic:** S29 Art (9/9)

Q: How can exploring art online benefit a person with dementia?

A: Exploring art online gives a person with dementia access to a wide variety of images and stories. They can learn new things, ask questions, and explore different topics at their own pace. It can also be a fun and relaxing activity that keeps their mind active.

Source: ODJ 5, Interview with Brenda and Mark Roberts | Online Dementia Journal · 10:25-11:59 · video · ODJ_v5_SingleAgent-qwen3-14b-v3_q4

Topic: F09 Art, creativity and storytelling (9/9 models) · **Subtopic:** S30 Storytelling and reminiscence (9/9)

Q: What is a good way to encourage storytelling and family bonding with a person with dementia?

A: A good way to encourage storytelling is to create a trivia game based on family history and personal stories. This helps everyone learn more about each other and creates opportunities for laughter and connection. The person with dementia can share stories, and others can guess who did certain things, making it a fun and engaging activity.

Source: Master 8, How to Establish a Memory Baseline using the Animal Fluency Test · 12:27-12:31 · video · Master_v8_SingleAgent-qwen3-14b-v3_q10

Topic: F12 Memory screening: animal fluency test (9/9 models) · **Subtopic:** S33 Animal fluency test (9/9)

Q: Why is it helpful to know your own baseline score?

A: Knowing your baseline helps you recognize when something is different. For example, if you usually score around 24 but suddenly drop to 18, it might be worth checking in with a doctor or caregiver.

Topic: F05 Brain changes and behavior (9/9 models) · **Subtopic:** S18 Brain changes and behavior (9/9)

Q: What are some examples of changes in behavior that a person with dementia might experience?

A: Some examples include changes in eating habits, such as suddenly only wanting to drink running water, or changes in bathroom habits, like avoiding the litter box if it isn’t exactly to their liking. These changes can be confusing and frustrating, but they are part of the condition and not intentional.

12 highly rated and 4 low rated normal pairs; then 4 deliberately bad pairs

1. Normal pair, highly rated

Source: SUP 13, SUP! with Catherine Livingstone · 29:24-29:31 · video · SUP_v13_SingleAgent-qwen3-14b-v3_q22

Topic: F01 Daily routines, memory and independence (7/9 models) · **Subtopic:** S01 Feeling safe and secure (7/9)

Q: What is the importance of "stillness" in dementia care?

A: Stillness is important because it allows the person to rest, reflect, and feel at peace. It is a natural part of the person's experience and should be respected rather than seen as a lack of activity.

Q: What is a Brain Connection Cafe?

A: A Brain Connection Cafe is a free, fun event that helps people learn how their brain takes in and remembers information. It uses different activities to help people understand how they learn best and gives them a chance to exercise their minds in a social setting.

Source: Master 7, A Deeper Dive Into How to Respond When a Person Living with Dementia Asks "Have You Seen My Mom?" · 0:32-1:50 · video · Master_v7_SingleAgent-qwen3-14b-v3_q1

Topic: F04 Communication: responding without correcting (9/9 models) · **Subtopic:** S16 Communication techniques (7/9)

Q: What should a caregiver do when someone with dementia says, "Have you seen my mother?"

A: The caregiver should notice the emotion behind the words and respond with empathy. Instead of immediately trying to solve the problem, they should pause, reflect, and ask questions that help explore what the person might be feeling or needing, such as, "Are you looking for your mother because you want to be with her or do something else?"

Topic: F07 Loneliness, social connection and celebrations (9/9 models) · **Subtopic:** S24 Loneliness and social connection (9/9)

Q: How can caregivers support someone with dementia who is struggling socially?

A: Caregivers can support someone with dementia who is struggling socially by providing separate spaces, different activities, and opportunities that help them feel more comfortable. It's important to be present with them, acknowledge their differences, and find common ground. Segregation isn't helpful, but recognizing when someone needs space or a different kind of interaction can be very supportive.

1. Normal pair, highly rated

Source: ODJ 19, Two Kinds of Vision That All Humans Have · 15:02-15:10 · video · ODJ_v19_SingleAgent-qwen3-14b-v3_q11

Topic: F01 Daily routines, memory and independence (8/9 models) · **Subtopic:** S02 Visual and verbal cues (5/9)

Q: How can caregivers support a person with dementia who has changes in their vision?

A: Caregivers can support a person with dementia by observing how their vision changes—whether they are overly cautious or not cautious enough. They can then adjust the environment, provide warnings before approaching, and help them navigate safely to reduce confusion or risk.

Source: Teepa 12, O R K A Poland's Interview with Teepa Snow · 9:01-10:05 · video · Teepa_v12_SingleAgent-qwen3-14b-v3_q5

Topic: F02 Programs, care coordination and long-term care (9/9 models) · **Subtopic:** S08 Community and dementia-friendly spaces (8/9)

Q: How can young people help improve the way dementia is viewed and managed?

A: Young people can learn about dementia early, challenge negative attitudes, and model positive ways to care for older adults. Their openness and ability to adapt quickly can inspire change in how dementia is approached.

Source: Master 9, How To Assist Someone in the Bathroom · 13:14-13:33 · video · Master_v9_SingleAgent-qwen3-14b-v3_q12

Topic: F06 Physical assistance and touch (9/9 models) · **Subtopic:** S20 Sitting and standing (9/9)

Q: How can caregivers help someone with dementia sit down safely after standing up?

A: Caregivers can help by guiding the person to lean forward before sitting. This uses the body’s natural movement patterns and reduces the risk of falling or feeling startled during the transition.

Source: ODJ 5, Interview with Brenda and Mark Roberts | Online Dementia Journal · 13:00-13:49 · video · ODJ_v5_SingleAgent-qwen3-14b-v3_q5

Topic: F07 Loneliness, social connection and celebrations (9/9 models) · **Subtopic:** S25 Holidays and family events (8/9)

Q: How can caregivers prepare for busy times of the year, like holidays, to reduce stress for someone with dementia?

A: Caregivers can prepare for busy times by planning ahead and avoiding crowded places during peak hours. They can also make arrangements for errands or trips during less busy times. This helps reduce sensory overload and keeps the person with dementia calm and safe.

Source: ODJ 16, Arts Corner - Interview with Brain LeBlanc · 7:43-7:46 · video · ODJ_v16_SingleAgent-qwen3-14b-v3_q1

Topic: F11 Music and rhythm (8/9 models) · **Subtopic:** S32 Music (8/9)

Q: How can music help a person with dementia feel more connected to others?

A: Music can help a person with dementia feel more connected to others because it creates a shared experience. Singing or listening to familiar songs can bring joy and encourage interaction, even if the person doesn't remember everything else. It helps build a sense of connection and comfort with others.

Source: Master 8, How to Establish a Memory Baseline using the Animal Fluency Test · 1:04-1:30 · video · Master_v8_SingleAgent-qwen3-14b-v3_q1

Topic: F12 Memory screening: animal fluency test (9/9 models) · **Subtopic:** S33 Animal fluency test (9/9)

Q: What is the animal fluency test and how is it used?

A: The animal fluency test is a simple one-minute exercise where a person lists as many animals as they can think of. It helps caregivers track changes in their own or a loved one's cognitive abilities over time by establishing a baseline number of animals they can name.

15. Normal pair, low rated

Source: ODJ 30, Could it be Lewy Body? · 3:33-4:35 · video · ODJ_v30_SingleAgent-qwen3-14b-v3_q2

Topic: F05 Brain changes and behavior (7/9 models) · **Subtopic:** S18 Brain changes and behavior (7/9)

Q: Why might someone with Lewy body dementia resist help during daily tasks?

A: When someone with Lewy body dementia is trying to help them, like offering a drink, they might resist because their brain interprets the action as a push in the opposite direction. This can lead to a struggle and make the person more confused, frozen, or upset.

Topic: F04 Communication: responding without correcting (9/9 models) · **Subtopic:** S16 Communication techniques (7/9)

Q: What is an AO and why is it important to avoid it when caring for someone with dementia?

A: An AO is when you say something that isn't true, like arguing or insisting on your own way. It's important to avoid because it can make the person with dementia feel frustrated or upset, and it doesn't help them feel understood or supported.

Topic: F05 Brain changes and behavior (6/9 models) · **Subtopic:** S18 Brain changes and behavior (6/9)

Q: What is the reticular activating system (RAS), and what does it do?

A: The RAS is a filtering system in the brain that helps us focus on important information, like our name or signs of danger. It helps us ignore unimportant details and pay attention to what matters most.

Topic: F05 Brain changes and behavior (9/9 models) · **Subtopic:** S19 Hallucinations and delusions (5/9)

Q: Why might a person with dementia have a delusion?

A: A person with dementia may have a delusion because they have some memory of an event but are missing a piece of information. Their brain tries to fill in the gap by making up a story or belief to make things make sense.
